

Modular spaces reinvented

We build stunning modular
solutions

Student dorm

Hospitality

What makes HotelMax modular unit from IteraSpace unique?

HotelMax units are based on the steel moment frame, meaning that they can be stacked horizontally or vertically (think of Legos). Due to the multi-functional steel frame and panelized walls, you can customize your space requirements to your needs.

A High Standard of Construction

We understand that the facility you use, represents you. That is why at IteraSpace we centre on manufacturing buildings, which go above and beyond the standard norm to provide you with spectacular buildings that you can be proud of.

Hotels and motels

Whether you need a 5 – star hotel in downtown New York or budget student accommodation, IteraSpace is your reliable partner with developing and construction experience to take your project to the next level.

Man – Camps

IteraSpace modular units can be shipped flat-packed inside a shipping container to keep transport cost low and units safe during transport. Limited space on site? No problem, our modules can be stacked vertically. The flexibility of our units even allows you to build an extra floor later or move your building, should your space requirements change. The unique ability of our units to take them apart and relocate them, makes them a good investment for workers accommodation.

Technical highlights: 150 mph wind speed design load, 4 story stacking (or higher if need be) · Type IIB non-combustible buildings · Flexible module sizes: from 8'x20' to 10'x40' · Steel moment frame with panelized walls · Easy to deploy · Easy to relocate
