

Modular spaces reinvented

We build stunning modular
solutions

Modular private dental clinic

Medical buildings

What makes HealthMax modular unit from IteraSpace unique?

HealthMax units are based on the steel moment frame, meaning that they can be stacked horizontally or vertically (think of Legos). Due to the multi-functional steel frame and panelized walls, you can customize your space requirements to your needs. Unique SIP walls enable cleanroom technologies if needed.

A High Standard of Construction

We understand that the facility you use, represents you. That is why at IteraSpace we centre on manufacturing buildings, which go above and beyond the standard norm. We implement the latest technologies in prefabricated construction and combine them with new architectural designs.

Flexible layouts

Need an addition to the hospital, but have only limited space on site? No problem, our modules can be stacked vertically. The flexibility of our units even allows you to build an extra floor later. We work together with you during the

designing phase and thus assure, that the modular medical facility which you will receive, will be suitable for both your staff and patients and compliant with international building standards.

Types of Modular Healthcare Buildings

HealthMax modules are perfect for instances where temporary healthcare buildings are needed, and they need to be erected quickly. Likewise, they are ideal for long-term installations too by providing eco-friendly structures that are less disruptive to construct than traditional methods. HealthMax modules can be used for a variety of building in the healthcare sector including.

- Medical and Dental Clinics
- Administrative Offices
- Laboratories
- Wellness Centers
- Hospitals
- Diagnostic Imaging and Dialysis Centers
- Assisted Living Facilities
- Company On-Site Clinics
- Clean Rooms
- Temporary additional space

Technical highlights: 150 mph wind speed design load, 4 story stacking (or higher if need be) · Type IIB non-combustible buildings · Flexible module sizes: from 8'x20' to 10'x40' · Steel moment frame with panelized walls · Easy to deploy · Easy to relocate
