

# Modular spaces reinvented

We build stunning modular  
solutions

VIP restaurant with terrace

# VIP Units

## Complete customization and flexibility

IteraSpace modules are based on the steel moment frame which means they can be stacked and expanded in all directions (think of Legos). With interchangeable wall panel, we can provide our clients with endless design possibilities, for example our walls can be exchanged for fully glazed panels, which fills the interiors with natural light.

## Special additions

Do you need a terrace on top of your building? No problem, at IteraSpace we can design and manufacture modules with staircase and railing to the roof top, which is converted into a terrace, where you can host parties or have a planter – box garden. The roof can also accommodate water tanks

and solar panels for special off the grid units. Whatever you want, we can design and manufacture.

## “Plug and play” modules

IteraSpace modules are fully equipped and prepared with great features of a custom tiny home or luxury resort. Just set them on ground, plug in electricity and water and you are ready to use them. Since our units' structure is made of steel it can withstand wind speeds up to 160 mph with special architectural cladding in metal, stone, or wood. Modules are great for pool houses, guest cottages, home offices, event VIP units, resorts that require stunning accommodation and many more.

**Technical highlights:** 150 mph wind speed design load, 4 story stacking (or higher if need be) · Type IIB non-combustible buildings · Flexible module sizes: from 8'x20' to 10'x40' · Steel moment frame with panelized walls · Easy to deploy · Easy to relocate
