

OptiMax Modular Unit -Tailor made for you

IteraSpace modular solutions are custom engineered for modular solution providers and their end customers. **OptiMax** units are based on the steel moment frame structure with a complete set of quick connection system, which enables coupling units together horizontally and vertically in no-time. We will take into account the specifics you require and provide you with personalized spaces with customizable interior and exterior.

The Concept and Execution

Our modular solutions are based on the range of modules with sustainability, great design, safety, energy efficiency and total comfort, build into their DNA. We will take care of strategic material sourcing, production and quality control. The flexibility of **OptiMax** units even allows you to build an extra floor later or move your building, should your space requirements change. Modular solutions have never been so easy.

Flexible Modular Space

**OptiMax** modular buildings are suitable for different types of spaces. Whether you need an office, classroom, secure government building, dormitory, sports facility, or high-end hospitality building, **IteraSpace** is your reliable partner! Our modular units are incredibly sturdy, sustainable, non-combustible, and flexible to accommodate any wishes. From budget-oriented to high-scale building, we engineer the perfect solutions.

Modular Medical Building

IteraSpace's Medical buildings are quickly deployable, relocatable and ready to expand. Complete customization ensures we can reinforce the structure to accept heavy scanning equipment or engineer clean rooms for sensitive environments. Our medical modules are Type II-B non-combustible, providing unparalleled safety for the occupants. The incredible flexibility of IteraSpace's modular systems means that expanding rooms is super easy by just adding addition-

al modules. Because stackability is built into the DNA of our modular units, rooms can be expanded by adding multiple stories on top, increasing the capacity without additional real estate needed.

Equipment

Welcome to the modular health center, where carefully selected furniture creates a serene atmosphere. Modern amenities ensure guests' comfort throughout their visit, providing a tranquil haven.

Technical Specifications

- 160 mph wind speed design load 3 story stacking or higher
- Type II-B non-combustible buildings
- Flexible module size: 8'x16', 8'x20', 8'x24', 8'x30, 10'x30'
- Steel moment frame with panelized walls
- Easy to deploy
- Easy to relocate
- Multiple color options

Modular Unit Data

- Electrical: NEC compliant
- Interior Height: 8'2" standard (up to 10')
- Roof Insulation: R30
- Floor Insulation: R21
- Wall Insulation: R15
- Floor Finish: Vinyl floor
- Ceiling Finish: Pure white, coil coated, smooth surface
- Wall Finish: Pure white, coil coated, smooth surface
- Lights: LED lighting / panels
- Sustainability: Great efficiency, fully recyclable materials
